

Live more, Bank less

To whom it may concern,

I am pleased to provide this testimonial for Tan Hng Wu, following the successful completion of his internship with DBS Bank from March 2025 to March 2026. During his internship, Hng Wu was attached to multiple digital initiatives and gained hands on experience across frontend development, backend API development, data migration, and digital user experience (UI/UX) experimentation.

Throughout his attachment, Hng Wu demonstrated strong adaptability and made meaningful contributions to several key initiatives. These included enhancements to the Martech Request Portal (MRP) as well as the design and execution of Adobe Target experiments, such as the TSP Full Page Revamp, which were aimed at improving customer engagement and acquisition. He was able to pick up new concepts quickly and apply them effectively in real project settings.

Hng Wu displayed solid technical competency in working with technologies such as Java, Spring Boot, MongoDB, MariaDB, and JavaScript. He handled complex tasks including API development, database migration, performance optimisation, and debugging of production issues. His contributions to improving API performance, resolving data inconsistencies, and enhancing overall system stability were particularly commendable.

In addition to his technical capabilities, Hng Wu demonstrated a positive learning attitude and was proactive in taking ownership of his assigned tasks. He worked independently when required, while also collaborating effectively with team members across different functions. His professionalism, sense of responsibility, and willingness to learn stood out throughout his internship.

Overall, Hng Wu has demonstrated strong potential as a software developer. I am confident that he will continue to grow and perform well in his future career, and I would recommend him for software engineering roles in a professional environment.
